

Moral issue

Delivery drones

Intention

A commercial company will deliver packages in the city center using drones.

Explanation

The drones use the road network (they fly above it). They deliver the packages to driveways or gardens.

Camera images are deleted after each delivery. The commercial company, from Portugal, points to the many advantages of drones over vans. Drones are safer, they are more environmentally friendly, they do not cause traffic congestion in the city and the employees of the drone company have excellent working conditions.
