

Moral issue

Noise disturbance

Intention

The municipality is launching an app with a decibel meter with which noise nuisance can be recorded and passed on to the police.

Explanation

Noise nuisance leads to a lot of irritation, but it is often wrongly reported. That is a problem for the overburdened police.

A Spanish company developed an app that listens, registers decibels accurately, and only when there is a real nuisance can a report be passed on to the police.

The company says it complies with all privacy laws and regulations.
