

Moral issue

# Electric scooters

Intention

**Electric scooters in the city will only be allowed if they are equipped with 'smart' software.**

Explanation

Suppliers of electric scooters will only receive a license if the software actively contributes to road safety. For example: in pedestrian areas, the engine automatically switches off. Usage data is shared. Scooters have less power in 30 kilometer zones. Illegal parking is registered.

New updates will follow in the future with the same goal. Suppliers who do not want to cooperate will be banned.
